

FINAL PROJECT PROPOSAL IN SDF 104 (OOP)

Class:	BSCS 2B	
Team Name:	H.A.J.K High Rise	
Project Team:	Role	Name (Surname First)
	Project Manager/Documentation	Ferolino, Abegail T.
	Lead Programmer	Olaes, Hans Norman T.
	Assistant Programmer/Database Designer	Galzote, John Dave J.
	UI Designer/System Analyst	Dela Cruz, Jasper E.
	Business Analyst/Quality Assurance Specialist	Cortal, Kirk Patrick S.

Name of System: H.A.J.K High Rise Hotel Reservation System

System Description: A localized desktop Hotel Reservation System built with VB.NET (Windows Forms). Designed specifically to simplify and accelerate front-desk operations, this system will give hotel staff an easy way to manage daily guest check-ins, room availability, and payment records. It will also feature secure login access for staff members, backed by MySQL database.

System Features: (based on given minimum functional requirements)

- 1. User authentication and role-based access
- 2. Search function
- 3. Main menu & Dashboard
- 4. Report generation
- 5. CRUD module

System User Types: (e.g. Admin, Staff, etc.)

User Type	Use Case and Access in System Features
Admin	Financial report, staff and room management
Receptionist	Reservations, check-in/check-out billing management

Benchmark/Similar Application:

Name of System/Application	Website Link	Key Features
Hotel Booking System	https://www.hotelsystems.co.uk/	• Interactive booking calendar • Room availability management • Housekeeping & cleaning logs • Search & filter tool • Printable analytical dashboard.
Customized Hotel Reservation (Booking) System	https://www.infosolutionsgoa.com/hres.html	• Minimal front-desk data entry • Customized invoice generation • Comprehensive gross/net revenue reporting
Hotel Reservation System	https://www.sourcecodester.com/visual-basic-net/144/hotel-reservation-system-vbnet.html	• Basic check-in/check-out logging • Multi-guest room account linking • Room transfer functionality • Printable guest activity reports

Uniqueness of this application/system on the abovementioned system:

This offline desktop hotel reservation system will be designed specifically for a single-property hotel. Unlike generic hotel software that requires complicated setup, this system will come ready to use with the hotel's exact layout and billing rules. Built using Windows Forms, it will integrate an interactive, color-coded visual floor map grid that enables single-click room status tracking. It will also automate the billing process by calculating stay durations, applying local statutory discounts (Senior Citizen/PWD), computing taxes, and generating printable guest bills and revenue reports.

Project Development Estimate and Timeline:

Total No. of Weeks (Project Development): 5 Weeks

Week No.	Deliverables
Week 1	Requirements gathering and scope definition
Week 2	System Design & Database Schema Creation
Week 3	UI Development
Week 4	Linking the front-end forms to MySQL and setting up feature logic
Week 5	System Testing, Debugging, and Final Documentation

Technology Stack: (Resources needed for the project)

Programming Language	Visual Basic.NET
Database	MySQL Server
Design and UI	Windows Forms Designer
Library/Framework/Others	.NET Framework, MySql.Data
